Grey Trading EST 2016

- Grey Trading was founded by Ryan Grey Homfray-Jones in July 2016. Ryan gained 8A* at GCSE and 3A*s and 1A at A Level in Biology, Chemistry, Maths, and Art. At 18 years old he invested his Trust Fund into Physical Silver bullion on January 11th, 2011 and closed out in September 9th, 2011. Having made 55% on the 6 figure Sterling fund he decided to pursue trading alongside investing. Ryan self-taught himself how to build and test strategies for years using Meta Trader and by 2015 March Ryan made a breakthrough. Ironically the breakthrough did not come in Meta Trader, it came through Pure Mathematics in what eventually became formalised into a 9 State Model by July 2016. The 9 State Model was then coded into Meta Trader (March 2017) and TradingView (December 2017) to be used effortlessly. Today we trade Crypto Futures, Forex and the US Stock Market with monthly triple figure returns.
- At the core of Grey Trading are a unique set of equations that are used to categorise a financial market in to 1 of 9 states. This is known as the 9 State Model.
- In this document, we will discuss how Mathematicians have become the hottest players on Wall Street with Four highly anticipated topics with five key focus areas that are directly linked to making your first million.

Making My First Million

1. Why I Started Trading in the First Place?

I first began trading in 2012 July, my first trade was a monster 66% trade and it got me hooked. Prior to July 2012 I had only ever invested in Physical Silver Bullion and I did not actively take positions so that I could make money if an asset fell in value. Between October 2011 and March 2015, I built my own strategies trying to find the best pattern in the Gold Market. I did this through coding and testing my own strategies on Meta Trader. I realised that no-one had a system that simply worked – yet alone worked on all financial asset classes. The strategies that I created only worked on the Gold Market. I realised that if my strategy only works on Gold – I took the approach that my strategy was wrong – and made it my goal to find a Universal Theorem as opposed to a strategy from that point. I was asking a lot from myself – and had to dig deep as I knew that despite having a well-paid career in Dentistry ahead of myself, I could never make it to what I called Super Rich without having a way to use the capital from my job to make the 100 Million I dreamt of. Many people have criticised me for why I would want to so much money – my end game is to use the money to fund my private research into finding cures for medical diseases. I am a firm believer in not leaving things to chance. My breakthrough finally came when I stopped using traditional methods and created equations based on what I could observe about the Gold price. When I tested it on the Forex Market the equations held, the Forex Market is regarded by far as the hardest market to trade as many Banks report losses and inaccurate currency price predictions in the Triennial Forex Review. This was a review I came across on my Finance Degree which examined 24 large banks and their ability to predict FX rates. I tested my equations going back to the 1980's for FX and 1950's on the US stock market – it passed. From my point of view – if a strategy cannot pass all years in history then you shouldn't use it. Once I had a strategy that worked, and I was happy with my next goal was figuring out how to make money as fast as I could. I had spent 4 years (2011 to 2015) learning everything about traditional methods, the next 3 years (2015 to 2018) was spent trading making money and perfecting it to an exact science that would not fail. In 2018 I was able to turn 15 000 USD into just shy of a million in 12 months. The three things which pushed me to creating my strategy were that my theorem had to work on everything otherwise it wasn't correct, it had to be able to create 1 Million in 12 months from 5 figures and it had to have a high success rate based on the back tests.

2. How Hard is Trading?

Learning to trade successfully can seem like an impossible endeavour if you've tried and failed. Placing trades is not difficult, performing a traditional analysis is not difficult and the internet is a very comprehensive source for these outdated techniques. On the other hand, finding what Methodologies Hedge Funds and Top Quant Traders use on Wall Street is where it goes underground. You are competing against most of the top Math and Physics Grads from the Ivy School League who have higher IQ's than your 90% of your average traders – hence why 90% of the retail traders lose. The Market doesn't react to the most people trading in a direction it reacts to who moves the most money – this money is the hands of a few.

3. How Hard is My System to Learn?

Trading simply boils down to when do I need to buy and when do I need to sell. The hardest part is the maths behind it all. We have coded our strategy into the TradingView platform which can be readily accessed by anyone, anywhere and at any time. We have made the course easy to follow and get started with. We have made split the course into three parts – Getting Up and Running Today, Automating Your Trading and the Theoretical Components of how we went about building our strategy. We go into a lot of detail about the mechanics of our equations we use which some members want to learn because they don't like to just buy essentially a black box and not know what's inside or how it actually works. Our automation module is useful for when you have been ready to save time and we can get you started today.

4. How Did I Celebrate Reaching My First Million?

Recently I bought a second-hand McLaren 570S which was at a good price and wouldn't break the bank having spent since 2011 working hard at trading I am confident with my ability to get to 10 million my next milestone in 2019.

Making Your First Million

1. Read Our Getting Started Guide

On our website we have our Getting Started guide which explains in 12 pages everything you need to know to get set up. It's aimed at the complete beginner who has no prior experience to trading or financial markets. It is to the point, clearly explained and an insightful read.

2. We Accept Payments in Bitcoin and through PayPal

Please use our website to follow the payment instructions by clicking on Courses and then Buy Now – we accept payments in Bitcoin and through PayPal. You will then be welcomed into Grey Trading and receive your VIP Package.

3. Lifetime Grey Trading VIP Membership

You will receive a lifetime membership to Grey Trading VIP and lifetime access to our Trading Tools.

4. What Could You Have Done in the Last 6 Years?

On January 1st, 2013 Bitcoin was only 100 USD, on January 1st, 2019 Bitcoin was 4 000 USD. Thus a 1 000 USD investment in Bitcoin would now be worth 40 000 USD. But what most people don't realise is that if you learn to trade Bitcoin you could make much much more. If you had traded Bitcoin using our strategy that 1 000 USD would now be worth 40 000 000 USD. What is also worth noting is that regardless of whether Bitcoin goes up, down or sideways is that you can make money by simply trading so you have more Bitcoin. If you bought 1 Bitcoin today for 4 000 USD in Bitcoin and it stays the same 5 years from now that 1 Bitcoin you own is still worth 4 000 USD but if you trade Bitcoin capturing all the moves – on average Bitcoin moves 20% a month you could trade that 1 Bitcoin until you have 100 Bitcoin.

5. What Could You Do in the Next 5 Years?

The one thing that is certain is that Bitcoin will continue moving 20% to 40% a month up or down for the next 5 years. It's your job to use our system to make more Bitcoins.

Trading Results

1. How Much Could You Make Trading Using Our Strategy?

In 2018 our strategy averaged X % on each trade, there were X trades and a typical trade lasted X days. So, in an average month you can expect to make XX % and over a year you can hit XXX USD starting with XXX USD.

2. Trading Results 2018

In 2017 December we began trading Bitcoin Futures when the Futures Market opened. We allocated 15 000 USD to trade with on BitMEX and by the end of the year our accounts now stand at almost 7 figures. Our best trades that we took are shown below and BitMEX account statements at the end.

3. Historical Results 2012 to 2017

Prior to trading Crypto we did our research into how our strategy would have performed between 2013 and 2018, some of the coins we trade did not exist then, so we have only included Bitcoin and Ethereum.

4. Historical Results 2012 to 2017

Prior to trading Crypto we did our research into how our strategy would have
